

SEAMLESS

THIN PORCELAIN PANELS BY SPECIALTY TILE

SEAMLESS SLAB SPECIFICATION

Contemporary designs soar when there are no barriers. Technological obstacles of the past have been eliminated, giving designers the freedom to create seamlessly with thin porcelain panels, so that your design is uninterrupted. Because scale matters.

Thin porcelain panels can be used in a variety of applications, including exterior cladding, walls, floors, over existing tile, on countertops and furniture. With so many options, we can provide technical assistance with a specification that is customized for your project.

Tips for specifying slabs:

- **Plan for your seams:** Whenever possible, it is ideal to build to suit the size of the slabs. With a variety of slab sizes ranging up to 126", it's easy to find a size that is a good match for the dimensions of your project. They can be installed horizontally or vertically, so consider your options to minimize waste. Although priced by the square foot, slabs are sold as full slabs, so it's best to consider a design that will get the most use of each slab. If you are carrying over graphics from one slab to another, ensure your cuts won't interrupt the graphics.
- **Plan for the size of the slab in relation to the room:** Even though your wall is the right size, is your room? If you cannot carry in a slab through a doorway and manage to turn it around in the room, or if the elevator to a job site doesn't fit a slab, a redesign with a smaller slab size might be the best option.
- **Plan for your fabrication:** Fabrication costs can range significantly from project to project. Corners, outlets, and custom build-outs are typically add-ons, so ensure that they are planned for. Consider using Schluter edge profiles wherever feasible to save on fabrication costs.
- **Specify the right setting materials:** We can assist you in writing a spec for the correct allied products for your project.

Testing data is relevant to the application and varies by color. We can provide data upon request.
